What is CBD?

Competency By Design is the Royal College’s model of Competence-Based Medical Education (CBME) which is an educational model that is...

- More oriented to outcomes rather than time in training (i.e. what trainee can DO)
- More flexible to learners’ prior skills and current needs
- Training using a coaching approach with more regular feedback & entrustment decisions
- Enhanced tracking of learners’ progress and performance

What is an EPA?

An Entrustable Professional Activity is a unit of work actually done during the clinician’s day (e.g., admit a patient to hospital, carry out a procedure, lead a family meeting)

- There are 29 EPAs for the PGY1-4 Internal Medicine training program
- Each EPA gets assessed several times for each resident
- Each EPA is made up of several "milestones"
- The EPAs increase in complexity through stages

Primer for Handover – EPA FOD 2C

This EPA focusses on the ability to perform handover for patients admitted to acute care settings with common medical problems. The assessor is the supervisor, and this EPA is done under direct observation. It is generally completed in Blocks 5-13 of the PGY1 year.

EPA MILESTONES: Handover FOD 2C

1. Identifies patients requiring handover to other physicians or health care professionals.
2. Selects appropriate setting, minimizes distractions and ensures receiver engagement and confidentiality of information.
3. Summarizes patient’s issues: illness severity, concise medical history, current issues, pertinent or pending workup.
4. Provides current plan and anticipatory guidance for results of outstanding investigations and/or next steps for management.
5. Communicates directly with receiving provider during transitions in care, confirming understanding and responsibility.
6. Documents and updates patient issues in the transfer summary and/or electronic handover tool.

HOW TO COMPLETE AN EPA ASSESSMENT:

1. You or the resident initiate the assessment. You observe the resident carry out the activity. We expect at least 10 minutes of direct observation for this tool. Parts of the assessment can be done as case review/discussion.
2. You or the resident sign onto medsquarers, and provide the assessment demographics. This can be done on the mobile phone or computer top.
3. From the list of milestones pertinent to the EPA, choose 2-3 milestones that are relevant to the activity, and provide comments about the resident’s performance. Please also indicate the performance level on each milestone you assessed, using the entrustment scale. You are not required to cover all milestones, but are welcome to.
4. Using the global entrustment scale, decide whether the resident can be entrusted overall to perform this activity with a similar case in the future. In general, residents are not expected to be entrustable early in a new stage of training, although this particular tool verifies skills that should have been learned in medical school.
5. Provide 2-3 specific, targeted comments on what they did well and suggestions for improving their performance.
6. Discuss your feedback with the resident.

GLOBAL ENTRUSTMENT SCALE (Autonomous and Consultancy levels are entrustable)
